REASONS FOR ALLOWANCE

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/29/2003 has been entered.

Claims 1-31 are pending.

2. The following is an examiner's statement of reasons for allowance:

Concerning claims 1-31, no prior art has been found teaching or suggesting the kit for nucleic acid amplification comprising a single stranded external control polynucleotide, a forward primer, a reverse primer and a detectable probe wherein the forward primer and the detectable probe are separated by 0-5 nucleotides when hybridized to the external control polynucleotide, and the reverse primer and the detectable probe are separated by 0-5 nucleotides when hybridized to the external control polynucleotide.

The closest prior art is the reference of Aoyagi et al. (5952202, issued September 14, 1999). Aoyagi et al. disclose that a kit contains internal control polynucleotide with 50-500bp in length (See column 7, lines 24-31). Aoyagi et al. do not disclose that the forward primer and the detectable probe are separated by 0-5 nucleotides when hybridized to the external control polynucleotide, and the reverse primer and the detectable probe are separated by 0-5 nucleotides when hybridized to the external control polynucleotide.
